

CMPI BTEB Result Import Guide

Generated: 21 Jun 2026, 03:25 AM

Fixes Applied

#	Fix	Files
1	<code>exam_type</code> removed from <code>updateOrCreate</code> lookup key → rescrutiny overwrites regular	BtebResultController.php (×2), ProcessBtebDriveImport.php
2	Center code regex fixed → only matches <code>^74026 - Institute Name</code> , ignores subject codes	Both controller + job
3	Frontend count fix → <code>passedSemesters</code> no longer filters by <code>exam_type</code>	Results.tsx
4	Job refactored → per-file DB save (prevents OOM)	ProcessBtebDriveImport.php

Run the Import (Linux Terminal)

Step 1: Go to backend directory

```
cd /path/to/CMPI/backend
```

Step 2: Check current DB count

```
php artisan tinker --execute="echo 'Total: ' . DB::table('bteb_results')->count();"
```

Step 3: Run the import (**1 line, copy-paste entire thing**)

⚠ Important: This single command does everything — no need to type manually inside tinker.

```
php -d memory_limit=4G artisan tinker --execute="(new App\Jobs\ProcessBtebDriveImport(App\Models\ImportJob::create(['drive_url'=>'https://drive.google.com/drive/folders/1ua9pI1wcno-ang7UL30x...>handle();echo 'Import done!';"
```

After Import — Verify Results

Check rescrutiny count:

```
php artisan tinker --execute="echo 'Rescrutiny: ' . DB::table('bteb_results')->where('exam_type', 'rescrutiny')->count();"
```

Check specific roll (885535):

```
php artisan tinker --execute="echo json_encode(DB::select('SELECT id, roll, semester, exam_type, gpa, status FROM bteb_results WHERE roll = \'885535\' ORDER BY semester'));"
```

Monitor progress (in another terminal):

```
watch -n 15 'php artisan tinker --execute="echo json_encode(DB::select(\"SELECT id, status, processed_files, total_files, total_results FROM import_jobs ORDER BY id DESC LIMIT 1\"));"'
```

Troubleshooting

Import fails (OOM/timeout): Reset stuck jobs first

```
php artisan tinker --execute="DB::table('import_jobs')->where('status', 'processing')->update(['status'=>'failed']); echo 'reset done';"
```

```
php -d memory_limit=4G artisan tinker --execute="(new
App\Jobs\ProcessBtebDriveImport(App\Models\ImportJob::create(['drive_url'=>'...', 'semester'=>'auto', 'regulation'=>'auto', 'holding
>handle();echo 'done';"
```

Key Files

File	Path
Controller	backend/app/Http/Controllers/Api/BtebResultController.php
Job	backend/app/Jobs/ProcessBtebDriveImport.php
Migration	database/migrations/2026_06_18_000020_create_bteb_results_table.php
Frontend	client/src/pages/Results.tsx

DB Schema

Unique constraint: (roll, semester, regulation) — exam_type NOT in key.

Done! After import, frontend e search korle rescrutiny wala rolls e **"Board Challenge"** badge dekhabe.
